Median of a Triangle

The median of a triangle is a line segment from the vertex to the midpoint of the opposite side.

NAME: _____
CLASS: _____

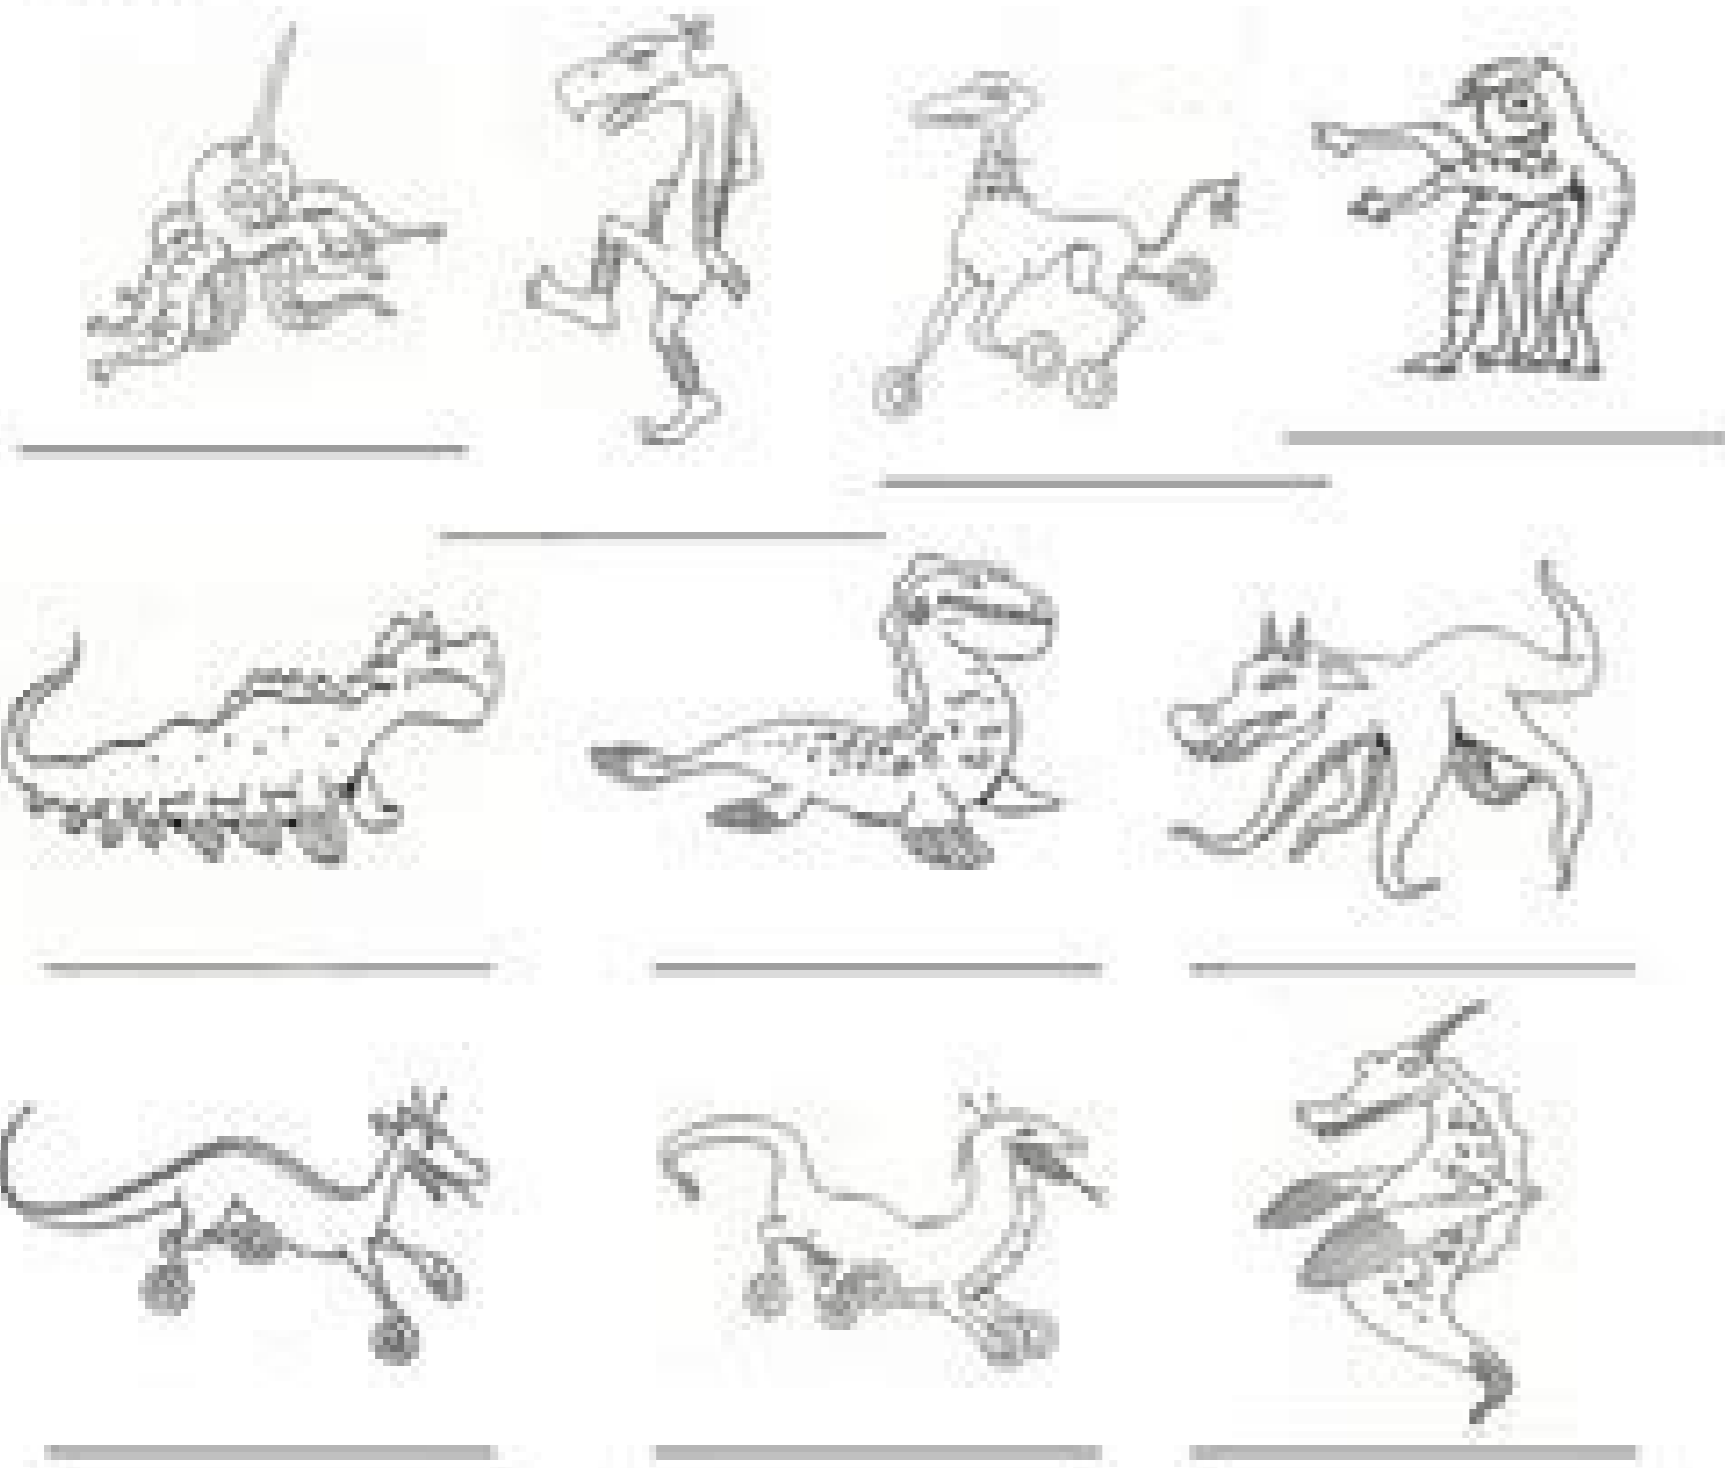

Construct a Dichotomous Key of Imaginary Creatures

PART A.

Under the figures below, assign a Genus and species name for each creature. Always capitalize the first letter of the Genus, while the species name is written in lowercase. Both words are underlined or italicized. eg., "Crossifus volutus."

PART B.

In the table provided, create a series of numbered steps with the first step showing the first characteristic you used so that someone could use it to identify any creature from this group of 10 creatures. At each step, offer two choices for classifying the creature based on a single characteristic. For example, you may use the characteristic "appendages are flippers". Your first numbered step in your key would be (1a) appendages are flippers, (1b) appendages are not flippers.

Read the story on side a and side b. Then circle the time taken.

Millie's Egg
Millie spent summers on her grandparents' farm in West Virginia. She helped Grandma Nelson bake, snap beans, husk corn, and gather eggs.
One summer day, Grandpa Nelson backed his truck into the yard. It was carrying wiggling boxes that were making peeping.
